

friendlyway impress

The information system for highest demands

Το **Impress** αποτελεί παγκόσμια καινοτομία στον χώρο της επικοινωνίας και της προβολής.

Το **Impress** δεν είναι απλά μία ψηφιακή οθόνη, είναι ο τέλειος συνδυασμός μεγέθους, κομψότητας, λειτουργικότητας και τεχνολογίας.

Η λιτή κομψότητα των γραμμών και ο λεπτός σχεδιασμός προσφέρουν στο **Impress** μια εξαιρετική εμφάνιση.

Οι εντυπωσιακές διαστάσεις των οθονών 32", 40", 46" & 60" και η δυνατότητα παρουσίασης πολλαπλών εφαρμογών ταυτόχρονα, καθιστούν το Impress ιδανικό μέσο επικοινωνίας.

Manufactured with certified quality:
SN EN ISO 9001 : 2000 SN EN ISO 13485 : 2001

friendlyway secure browser

The security software for your public internet access

The full version of the secure browser software included in the price of every friendlyway terminal system prevents unwanted system intrusions. Internet access is limited to the areas you choose. If you would like to test the software right away, you can download the limited version free from our Internet site. In 2004 friendlyway secure browser received an excellent rating by the readers of the following magazines:

friendlyway secure browser

Excellent software is your passion. And always an incentive for us to develop our products further. Since the current friendlyway secure browser software was introduced, our customers have repeatedly commented on it with enthusiasm. Now we have technologically and visually optimized it even more – with friendlyway secure browser software, you once again experience professional software from friendlyway on a state-of-the-art level.

For one thing, the friendlyway secure browser software is now equipped with "active skin" technology. This completely new technology from friendlyway software development enables you to adapt the control elements easily to your company design.

But you can also have the control elements designed for your layout by friendlyway. At a small fee, we give you the software in your special company colors, and the individual buttons and the field backgrounds in your own design.

With the friendlyway secure browser, you can create a custom kiosk portal for your Internet station by just changing a few settings. The standard control elements optimized for touchscreen use can be set up to call the Internet sites you want.

The new friendlyway secure browser can really show its strengths when integrating media content. Working together with the friendlyway composer you can, for example, call up a live TV screen saver. So if your Internet access is not used for a few minutes, CNN will appear in full screen, as an example.

You set a high value on a professional public appearance with your Internet system. You know that an unprotected system can be permanently disabled within a few minutes, even by children. It can happen so fast that, even under constant supervision of the system, there is hardly a chance to avoid such attacks. The secure browser software from friendlyway offers you permanent security, which means that the investment in your Internet system will certainly pay off.

By integrating the friendlyway composer functionality, you can now play any medium in a secure environment. It doesn't matter if it is a PowerPoint presentation, a Flash animation, a computer game, a signpost function or even a Macromedia Director application.

Incidentally, the friendlyway secure browser was awarded best grade in 2004 by ZDNet readers as outstandingly secure browser, "5 stars"!

friendlyway composer

The composition and control software for your media

With the friendlyway composer software, you can run and time control any media already available in your company. PowerPoint, Internet, DVD, videos, Macromedia Director, live TV all run in friendlyway composer, time-controlled the way you specify. Every friendlyway system already has a pre-installed friendlyway composer. You can also download a free 5 day test version from our Internet site.

friendlyway composer

friendlyway composer, which made its debut in 2002 as friendlyway multiscreen software, has already been used in numerous projects and thus become one of the most successful media control products.

Today, after years of constant development, friendlyway composer 2004 shows that it is not just the old software in new clothes. It is a completely newly designed software, which sets new standards in terms of design, comfort and multimedia technology. There is practically more of everything: graphic presentation creation through drag & drop functions in Windows XP-look, the integration of live TV and many more functions.

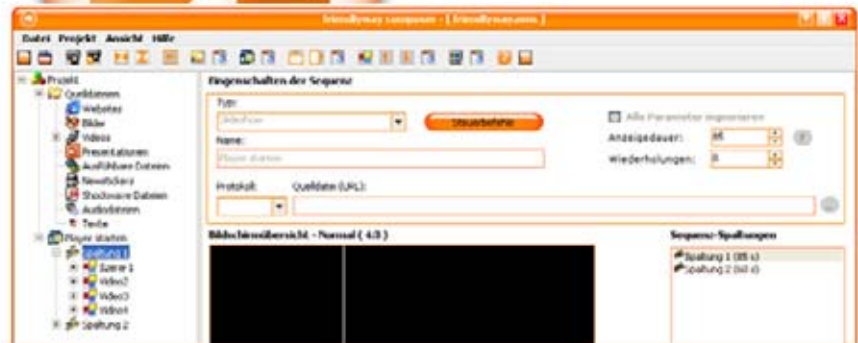

Once again we have put special value on the simplicity of operation. No programming knowledge is required for any of the extensive control functions.

Mr. Langheinrich, Businesscom AG:
"The friendlyway composer represents a very flexible, powerful and stable tool for the presentation of multimedia contents. Besides supporting all relevant media formats, the application offers a series of features which, in comparison to all known competing products, can confidently be described as unique."

The most important functions:

- screen segmentation into separately controllable segments
- control of multiple screen media
- simple media integration with Internet, PowerPoint, DVD, CD, Macromedia Director, live TV, images, text, sound, and more
- distribution of content
- time-control of advertising media
- Immediate content updates, e.g. from the secretary's office or reception
- simple text ticker creation of ad hoc announcements
- protection of interactive areas through interaction with the friendlyway secure browser

With its innovative flexibility and striking interface style, friendlyway composer is ideally designed for the age of digital advertising displays. No wonder that friendlyway has the most satisfied customers in its segment (according to a friendlyway customer survey in 2003).

- live TV scene saver through interaction with the friendlyway secure browser
- remote control through interaction with the friendlyway clientmanager
- creation of display statistics

friendlyway clientmanager

The remote control and monitoring software for your media

With friendlyway clientmanager software, you can remotely monitor and control your media. Moreover, the software enables remote distribution of content via LAN and dial-up connections. With the friendlyway clientmanager, you can reactivate failed systems and generate usage statistics for the systems.

friendlyway clientmanager

The friendlyway clientmanager, software for remote monitoring and control of Internet terminals, info stations, vending machines and advertising displays, has already been operating successfully since the year 2000 under the name of lifeline software.

Through continuous development, as well as years of experience with remote monitoring of heterogeneous Windows-based clients, the friendlyway clientmanager has become a valuable component within the world of friendlyway software.

It goes without saying that the friendlyway clientmanager works closely together with the friendlyway products secure browser and composer. For one thing, the clientmanager gets the user statistics which were generated locally by the secure browser and merges them centrally on the server for all clients. The friendlyway composer recognizes content that was upgraded remotely by the clientmanager, and integrates it automatically into the running presentation.

Through the so-called heartbeat function, the clientmanager receives information at regular intervals about the state of the software as well as the hardware of the monitored clients.

Just as with people, there is no time to lose if even one heartbeat fails. The clientmanager takes the initiative and remotely dials up the client. Through a multi-tier escalation concept, the clientmanager then reactivates the client.

The most important functions:

- Remote monitoring of software and hardware functions
- Remote control of contents
- Remote troubleshooting
- Remote content upgrades through drag & drop to individual systems, groups of systems, or all systems as a whole
- Remote upgrades of system settings for individual systems, groups of systems, or all systems as a whole
- Dial-up with virtual desktop function
- Generation of statistics
- Remote settings of friendlyway secure browser and friendlyway composer

friendlyway clientmanager software is especially suited for use in the following areas:

- Remote info station monitoring
- Monitoring clients in Internet cafés
- Remote monitoring and control of advertising displays in all sizes
- Remote vending machine surveillance
- Remote administration of intranet systems
- Remote distribution of large amounts of data (such as Video On Demand in intranet and extranet or Internet environments)
- Administration of Windows-based clients

friendlyway solutions are already in operation more than 3,500 times worldwide!
